

ALPES AERO GOES FOR ALSIM AL250

News / Maintenance / Trainings

ATO Alpes Aero, based in Annecy, France, has chosen an ALSIM AL250 training device. Valentin Goy, Pilot at Alpes Aero, explains why they have chosen the Alsim AL250: “We were looking for a simulator capable of meeting the new IFR PBN training requirements. The high-performance AL250 responds perfectly and its high level of image texture associated with panoramic screens fully meets the study of VFR navigation too.”

Audrey Jeffroy, Alsim Sales Director, mentioned: “We are very proud to welcome Alpes Aero amongst our customers. Before receiving the device, they will receive a Technical training that include a maintenance Training, a certification Training and a IOS Training. Long term perspective makes all the difference, we don't only sell a device, we make sure our customers get the knowledge how to use and certify the device.”

The Alsim AL250 is a generic and compact simulator for single & multi engine piston (SEP/MEP reconfigurable) PPL, CPL & IR training. The device meets all current regulatory standards and

responds to training requirements of smaller and mid-sized ATOs, flight schools, and universities. With more than 60 devices installed worldwide (16 devices installed in France), the AL250 has a proven track record for cost-effectiveness and helps save numerous aircraft hours.

Created by a team of enthusiasts, Alpes Aero now offers a full range of pilot training. Do you want to become a private or professional airplane pilot? The team of Alpes Aéro opens the doors of its training center to you, and looks forward to contributing to the realization of your dream. Excellence, thoroughness, safety and professionalism define our priorities. We are in Annecy, in the heart of the Alps. For more information about Alpes Aero, please visit www.alpes-aero.com
