

BOMBARDIER'S SINGAPORE SERVICE CENTRE COMPLETES ITS FIRST KA-BAND HIGH-SPEED INTERNET INSTALLATION ON IN-SERVICE GLOBAL 6000 AIRCRAFT

News / Business aviation, Maintenance / Trainings

- Bombardier was the first OEM to offer the revolutionary Ka-band system on its business aircraft, a breakthrough moment in business aviation
- Ka-band technology delivers the industry's fastest in-flight Wi-Fi connectivity, consistent performance and seamless coverage worldwide*
- Bombardier's award-winning Singapore facility provides superior customer service and high-quality retrofit work
- Bombardier demonstrates leadership in supporting its fleet with advanced technologies and high-quality OEM-expertise at its service centre network

Bombardier and Honeywell announced the latest delivery milestone in the installation of the revolutionary Ka-band satellite broadband technology aboard Bombardier *Global* and *Challenger* business jets. Bombardier's award-winning Singapore service centre installed its first Ka-band system on an in-service *Global 6000* aircraft. In 2016, the Singapore service centre installed the first-ever Ka-band system on an in-service *Global 5000* aircraft.

"Our customers need to stay connected no matter where they are in the world, and Bombardier continues to lead the industry in offering the most advanced in-flight media experience available today on both its new and in-service aircraft," said Jean-Christophe Gallagher, Vice President and General Manager, Customer Experience, Bombardier Business Aircraft. "With Ka-band, passengers can remain connected across oceans, at 41,000 feet, and virtually everywhere they fly. Moreover, our OEM-owned service centres have become masters of the installation to ensure aircraft are returned to service within a minimum downtime."

Ka-band technology features the industry's fastest in-flight Wi-Fi connectivity, allowing passengers to browse the internet, stream live TV and movies or stage a video conference virtually anywhere in the skies and as quickly and as effortlessly as they would in their home or office. The system leverages Honeywell Aerospace's JetWave™ hardware to deliver ultra-high-speed access, consistent performance and seamless coverage worldwide*. Bombardier's *Global* aircraft offer the luxurious Premier cabin and a cutting-edge cabin management system (CMS). In addition to impressive performance characteristics and advanced wing design, they provide a smooth ride and can operate in and out of certain challenging airports, all while keeping passengers connected.

"In Asia Pacific, business jet owners and operators are demanding better, faster, and more consistent in-flight Wi-Fi that is identical as what they have on the ground. With Honeywell's JetWave hardware and GoDirect™ Cabin services, business jet owners and operators now have the ability to manage usage and bandwidth to be cost effective," said Andy Gill, Senior Director, Business and General Aviation, Asia Pacific, Honeywell Aerospace. "This new generation of technology is a complete step change from previous generations of airborne hardware allowing a much smoother installation process. We have been working very closely with the Bombardier team to minimize the down time for Jetwave installations, so operators can adopt this technology with a minimum amount of disruption to their flight operations, which has been key to the rapid adoption of our JetWave system by leading business jet manufacturers like Bombardier."

In 2015, Bombardier became the first OEM to announce plans to offer Ka-band technology as an option on its new and in-service business aircraft, and the first to begin deliveries in 2016, a breakthrough moment in business aviation. The first retrofit installation on a *Global 5000* aircraft was completed at the Singapore service centre in July 2016. Bombardier received certification to offer the system on its new and in-service *Challenger* aircraft in May 2017.

OEM-owned service centres enable operators to benefit from faster access to Bombardier's worldwide parts and support expertise while pairing a Ka-band installation with a scheduled maintenance event.

Located at Seletar Airport, Bombardier's award-winning Singapore service centre is one of nine service centres, six line maintenance stations and 23 Mobile Response Team vehicles that comprise Bombardier's worldwide maintenance network. In February 2018, it celebrated four years of impressive growth and superior customer service and is recognized today as a centre of excellence for complex retrofit work. An acknowledged centre of excellence, the Singapore service

centre provides high-quality OEM expertise to Bombardier operators in the broader Asia region, including scheduled and unscheduled maintenance and full interior refurbishment and modifications, avionics installations and aircraft on ground (AOG) support. The Singapore service centre has more than quadrupled the number of engineers and technicians on staff since opening its doors in February 2014. In November 2016, the facility received the Asian Business Aviation Association (AsBAA) Icons of Aviation award for Best Maintenance Repair Organization in Asia.

Honeywell

Honeywell Aerospace products and services are found on virtually every commercial, defense and space aircraft, and its turbochargers are used by nearly every automaker and truck manufacturer around the world. The Aerospace business unit develops innovative solutions for more fuel-efficient automobiles and airplanes, more direct and on-time flights, safer flying and runway traffic, along with aircraft engines, cockpit and cabin electronics, wireless connectivity services, logistics, and more. The business delivers safer, faster, and more efficient and comfortable transportation-related experiences worldwide.
