

CIRRUS AIRCRAFT ADDS SECOND FAA-CERTIFIED VISION JET SIMULATOR FOR WORLD-CLASS FLIGHT TRAINING

News / Maintenance / Trainings, Manufacturer

Cirrus Aircraft adds second FAA-certified Level D full-flight Vision Jet simulator to serve expansion plans and provide access to world-class flight training, including initial type ratings and recurrent training for new and pre-owned aircraft owners at the Cirrus Aircraft Vision Center in Knoxville, Tenn. The latest Vision Jet simulator, built by CAE, is now fully operational. Vision Jet has continued as the best-selling jet for the last five years. Owners enjoy the Vision Jet's luxurious and spacious interior design, advanced safety systems such as the Cirrus Airframe Parachute System and Safe Return Emergency Autoland, reduced workload flight deck, convenience and entertainment features and impressive regional flight capability. Today, there are over 500 Vision Jets in the market and over 1,055 people are type-rated.

Todd Simmons, President of Customer Experience of Cirrus Aircraft., commented: “Cirrus Aircraft is dedicated to providing world-class flight training and we are continually investing in the Vision Center campus to expand our capacity and offer ultramodern training resources.”

The global leader in personal aviation now leverages two FAA-certified Level D full-flight simulators, two FAA-qualified Level 6 fixed-based training devices and multiple avionics trainers for Vision Jet training and demonstrating aircraft systems such as CAPS. First established as a Factory Service Center in 2016, the Vision Center campus has grown to include an Experience Center, Delivery Center, Flight Training Center, additional Factory Service Center and a Flight Center/Hangar Complex. The state-of-the-art Vision Center also offers training for its best-selling, high-performance, single-piston SR Series aircraft. The SR Series accounts for 32% of single-engine piston aircraft deliveries worldwide and over 77% of the high-performance single-engine piston market deliveries.

Through the company's award-winning flight training program called [Cirrus Approach](#), all Vision Jet and SR Series training is accompanied by a dedicated Cirrus Standardized Instructor Pilot (CSIP), individual training aircraft and a diverse catalog of instructional video courses. The Vision Center is complemented by three Cirrus Flight Training locations in Scottsdale, Arizona; McKinney, Texas and Orlando, Florida and over 100 Cirrus Training Center partners worldwide. The Vision Center in Knoxville is the only location that offers Vision Jet type ratings.
