

DASSAULT FALCON AUTHORIZED SERVICE FACILITY IN HONG KONG - TAG AVIATION

News / Business aviation, Maintenance / Trainings

TAG Aviation Hong Kong maintenance facility has been appointed a Dassault Falcon Authorized Service Center for the Falcon 7X/8X large cabin trijets. The move effective January 1st, 2021, will make TAG Aviation Hong Kong a complement to Dassault Aviation's other authorized service centres in the region and reinforces Dassault's already strong OEM support footprint in the Greater Bay Area.

"The new Hong Kong line service capability is the latest of a series of measures intended to reinforce our worldwide Falcon product support network," said Jean Kayanakis, SVP Worldwide Customer Service & Maintenance Network at Dassault Aviation. "It will provide further service options for our Falcon 7X and 8X customers while strengthening our longstanding relationship with TAG Aviation."

“We look forward to providing our high quality maintenance support to Falcon operators in the region. This welcomed service center status further increases our existing range of maintenance and cleaning services, provided by our experienced and highly capable team.” said Phil Balmer, TAG Aviation’s Director Maintenance.

TAG Aviation has been providing maintenance services in Asia for nearly a decade and have maintenance bases in Hong Kong and Macau. All stations are manned with dedicated Engineering & Grooming teams providing world class maintenance and cleaning services that include internal and external aircraft cleaning, MicroShield 360 disinfectant and Permaguard paint protection. The maintenance team provides regional coverage with Mobile Repair Party teams that can be readily deployed.
