

JET AVIATION RECEIVES EASA PART-145 APPROVAL FOR BOMBARDIER LEARJET 60 IN VIENNA

News / Business aviation, Maintenance / Trainings

Jet Aviation's maintenance facility in Vienna has recently received EASA Part-145 approval for the Bombardier Learjet 60 aircraft. The company began its first 120-month inspection on a Turkish-based Learjet 60 earlier this month.

With this approval, Jet Aviation's maintenance facility in Vienna is authorized to support the Bombardier Learjet 60 with line and base maintenance services up to and including the 120-month inspection.

"We strive to meet the business aviation service requirements of our customers when and where they need them," says Hakan Tin, managing director of Jet Aviation's MRO and FBO facility in Vienna. "As a mid-size, medium-range business jet, the Learjet 60 is a popular model in Europe and this approval provides much-needed maintenance support to aircraft owners and operators throughout the region."
