

NEW CENTER OF EXCELLENCE FOR AIRCRAFT MAINTENANCE IN MALTA BY SR TECHNICS

News / Maintenance / Trainings

SR Technics announced the ground breaking of the new six-bay hangar including significant back-shop facilities for its center of excellence (CoE) for aircraft maintenance in Malta. The project, as announced in February this year, will enable SR Technics to continuously provide high-quality aircraft maintenance and cabin modification services, now for up to six narrow body aircraft of the B737 & A320 families simultaneously.

The first bays of the hangar will be completed by the beginning of 2020. Such new CoE does not only open its doors to customers located within the region in a very central hub but it is a great opportunity for Malta's economy as the project requires a significant number of new skilled employees.

Frank Walschot, CEO of SR Technics, commented: "Last year we had to manage the difficult decision to close the aircraft maintenance operation in Zurich. However, at the same time we had the chance to expand our successful set-up in Malta. We remain committed to provide leading quality and service levels for all our customers and I'm confident that our expansion in Malta will support that commitment. After all we have successfully operated our current facility for nine years

and continue to build on that success.”
