

ANSAT AURUS HELICOPTER DELIVERIES WILL START

News / Business aviation, Manufacturer

Aurus brand comfortable cabin are good to go! Russian Helicopters received the approval from Rosaviatsiya. This will allow to start mass production and deliveries of this Ansat modification. Certification testing of Ansat Aurus Design were successfully completed in early February 2020. The certification tests were aimed at assessing performance of equipment in the cabin of the helicopter and electromagnetic compatibility with avionics.

The cabin layout consists of two seats for VIP passengers and three seats for accompanying persons. To achieve optimum ergonomic design, the cabin was developed using both computer modeling and testing with people of various anthropometric measurements. The Ansat helicopter has the largest cabin in its class. Combined with the design, this provides maximum passenger comfort.

"Ansats is a universal helicopter that has proven itself in several different fields. High reliability, ease of maintenance, compact size and a spacious cabin make Ansats one of the best helicopters for passenger transportation. The modified certificate, which allows to start serial production of a helicopter with a VIP cabin in the style of the Aurus brand, opens up new prospects for its operation", pointed out Oleg Yevtushenko Executive Director of Rostec Corporation.

"The Ansats Aurus Design will get its first operator very soon, and the interest shown in this helicopter at the MAKS air foretells new orders. The use of best domestic technologies and materials, as well as the attention to detail are the hallmarks of the Aurus brand, and we, with our colleagues from FSUE NAMI, have worked hard to create the design of the Ansats helicopter in the best traditions of this brand. The helicopter possesses excellent flight performance characteristics and provides an uncompromising level of flight safety", said the CEO of Russian Helicopters, Andrey Boginsky.

The Ansats Aurus Design design project was carried out by specialists of the Federal State Unitary Enterprise NAMI, the leading Russian scientific organization in the field of automotive development, and a designer and manufacturer of a line of luxury cars under the Aurus brand. First demonstration Ansats helicopter in Aurus brand style was held at the static exposition of Russian Helicopters as part of MAKS-2019 air show. During the show, the model was examined by the Russian President Vladimir Putin and the President of Turkey Recep Tayyip Erdoğan.

The light multipurpose Ansats helicopter was designed by the Kazan Helicopter Plant's design bureau. It is equipped with two engines and can be used for normal passenger and VIP transport, cargo delivery, environmental monitoring and as an air medical helicopter. High-altitude tests of Ansats have been successfully completed, which confirmed the possibility of its operation in mountainous terrain at altitudes up to 3,500 meters. The helicopter can be operated in a temperature range between -45 and +50 degrees Celsius.
