DASSAULT FALCON JET COMPLETES NEW LITTLE ROCK EXPANSION

News / Manufacturer

Dassault Falcon Jet has completed another major expansion of its **Little Rock** Completion Center that will add 350,000 ft² of production space to the Arkansas facility.

The centerpiece of the US$60m project is a new 250,000 ft² hangar earmarked for Dassault's latest two models – the Falcon 8X ultra long range trijet and the Falcon 5X very large body twin. The new completion hangar will bring the total facility footprint to 1.25 million ft². The expansion also includes refurbishment of cabinet, upholstery and headliner shops and an upgrade to older hangars.
