

KOREAN AIR BECOMES NEW A350F CUSTOMER

News / Airlines, Manufacturer

Korean Air has become a new customer for the world's only all-new large freighter, following the conversion of seven of its existing A350-1000 passenger aircraft orders to the A350F. A350F features the largest main deck cargo door in the industry, with fuselage length and capacity optimised around the industry's standard pallets and containers. Over 70% of the airframe is made of advanced materials, resulting in a 46 tonne lighter take-off weight than the competing derivative. The A350F is also the only freighter aircraft that will fully meet ICAO's enhanced CO₂ emissions standards, coming into effect in 2027.

Benoît de Saint-Exupéry, Airbus EVP Sales of the Commercial Aircraft business commented: "Korean Air is one of the world's largest cargo operators. The decision to add the A350F to its fleet is therefore a very significant endorsement of the aircraft's unique capabilities. The A350F will bring Korean Air the most efficient solution in the large freighter segment."

Currently under development, the A350F can carry a payload of up to 111 tonnes and will fly up to 4,700 nautical miles / 8,700 kilometres. Powered by the latest Rolls-Royce Trent XWB-97 engines, the aircraft will bring a reduction in fuel consumption and carbon emissions of up to 40% when compared to previous generation aircraft with a similar payload-range capability.

At the end of September 2025, the latest generation widebody A350 Family had won 1,445 orders from 63 customers worldwide, including 65 for the all-new A350F from 10 cargo carriers and one lessor.

Korean Air has ordered a total of 33 A350 aircraft. This now comprises 20 A350-1000s, seven A350Fs and six A350-900s, of which the first two have already been delivered. In addition, the carrier has outstanding orders for 39 A321neo single aisle aircraft.
