

LOCKHEED MARTIN SKUNK WORKS ROLLS OUT X-59, NASA'S NEWEST X-PLANE

News / Manufacturer

Lockheed Martin Skunk Works rolled out the X-59, a unique experimental aircraft designed to quiet the sonic boom, at a ceremony in Palmdale, California. The ceremony marked a significant milestone in Lockheed Martin's and NASA's decades-long journey to solve one of the most persistent challenges of supersonic flight – the sonic boom. Rollout ceremonies are a long-standing aviation tradition, and in the case of the X-59, it celebrated technical advancements, collaboration and innovation that stemmed from years of research, development and production of a one-of-a-kind technology demonstrator aircraft that will reduce the loudness of sonic booms to a gentle thump.

John Clark, vice president and general manager, Lockheed Martin Skunk Works, commented: "We're thrilled to take on this challenge alongside NASA, whose quiet supersonic technology mission will have lasting, transformational impacts for people around the world. This project is just one example of the broader ingenuity of our industry as we continually strive to push the envelope of what's possible."

Greg Ulmer, executive vice president, Lockheed Martin Aeronautics, said: "The entire X-59 team leaned into the expertise of both legendary organizations, NASA and Lockheed Martin, to ensure success for this program. I am extremely proud of everyone who made this historic moment possible."

Next, the aircraft will complete ground tests including engine-run and taxi tests before its next major milestone, first flight, later this year. After the aircraft is validated in initial flight tests, it will move into the acoustic testing phase. This phase will include flights over populated areas to provide U.S. and international regulators with statistically valid data required to help approve new rules that could allow quiet commercial supersonic flight over land. This would cut commercial flight times to half of what they are today, transforming travel for people around the world.
