

SUPPORTING SUSTAINABLE REGIONAL AVIATION IN CHINA - DEUTSCHE AIRCRAFT DEBUT AT AERO ASIA 2023

News / Manufacturer

Deutsche Aircraft made its debut at Aero Asia 2023. German aircraft manufacturer aims to provide sustainable regional connections with the D328 legacy aircraft and the new D328eco, the 40-seater sustainable turboprop. According to market forecasts, the Chinese aviation market will require 20% of the world’s commercial aircraft in the next 20 years.

Ryan Ding, China Regional Director at Deutsche Aircraft commented: “The Civil Aviation Administration of China is trying to encourage general aviation operators with a maximum limit of 30 passengers to handle short regional routes. This is a perfect match for our D328 legacy aircraft as well as our D328eco in the next phase. Aero Asia is a great opportunity for us to introduce the D328eco regional turboprop to the Chinese market while building solid relationships with industry partners. Deutsche Aircraft are pleased to be in Zhuhai to witness the latest developments in China’s aviation industry. Additionally, with the launch of our official WeChat account and Chinese website, we will become more accessible to the market.”

D328eco aims to support sustainable regional aviation in China

The outstanding flight characteristics and versatility of the D328eco allows it to access destinations with short and unpaved runways, in a variety of weather conditions. This will open up new route possibilities for businesses and people who rely heavily on regional aviation across China. The D328eco will also facilitate sustainable regional flights with the lowest fuel consumption and CO₂ emissions on the market. This aircraft is designed to operate on 100% SAF Power-to-Liquid (PtL), which can reduce CO₂ emissions by up to 95%.

Comfort comes first on the shortest of routes

An integrated Garmin Companion flight deck, brand new PW127XT-S engines and a comfortable and quiet cabin make the D328eco turboprop ahead of its time: an innovative and robust aircraft which offers maximum comfort for passengers and flight crew. These features set the D328eco apart as the most efficient, modern and sustainable regional aircraft in its class.
