

TECNAM P2012 VIP MADE ITS AMERICAN PREMIERE AT EAA AIRVENTURE OSHKOSH

News / Business aviation, Events / Festivals, Manufacturer

The highly anticipated U.S. premiere of Tecnam P2012 VIP took place at EAA AirVenture Oshkosh. Following its successful global debut at AERO Friedrichshafen earlier this year, the flagship twin-engine aircraft has crossed the Atlantic to introduce the American market to a new standard of executive travel. Designed specifically for discerning private owners and corporate operators, the P2012 VIP represents the pinnacle of Italian craftsmanship and aeronautical engineering. It takes the proven, rugged, and highly efficient P2012 Traveller platform and transforms it into an exclusive, luxurious environment designed to elevate the art of travel. U.S. premiere at Oshkosh offers American pilots, operators, and aviation enthusiasts their first opportunity to physically experience the aircraft's exceptional interior and commanding ramp presence. The P2012 VIP sets itself apart by offering an executive travel experience previously unseen in this category.

Giovanni Pascale Langer, Managing Director at Tecnam commented: "The US market has been eagerly waiting for an aircraft that combines true executive comfort with the legendary efficiency and safety of the P2012 platform. Bringing the P2012 VIP to Oshkosh allows American operators

and private owners to finally experience the unparalleled Italian craftsmanship and smart engineering that define this aircraft. It is not just about flying from point A to point B; it is about doing so with absolute elegance and operational peace of mind."

Francesco Sferra, P2012 Sales and Business Development Manager at Tecnam stated: "The P2012 VIP is a testament to the passenger experience in flight. During travel, on-board guests are immersed in a comfortable, luxurious, yet relaxing environment. The flexibility and adaptability of the interiors allows to relax with the on-board amenities as well as being active and productive through the connectivity and working space of the aircraft. The VIP interior can be matched to all the engine and wing variants of the P2012 series, and the reception from the American market recognizes the premium value of the VIP configuration."

Key highlights of the aircraft include:

- The "largest club of its class": a generous 6-foot backrest-to-backrest club plus two additional forward-facing seats and an optional extra seat. It features 8-way electrically adjustable real Italian leather seats, a handcrafted wood table and armrests, and Alcantara and leather finishing.
- Smart Technology & First-Class Ambiance: Traditional window shades are replaced with electronically dimmable smart panoramic windows, instantly transforming the cabin's natural light with a simple touch. Adjustable LED ambient lighting shifts seamlessly from a bright workspace to a relaxing twilight, accented by individual reading spots.
- Whisper-Quiet Journeys: An advanced three-layer soundproofing system envelops the cabin to dramatically reduce exterior noise. Combined with LEMO headset plugs at every seat for active noise cancellation, your flight remains as peaceful and undisturbed as a private lounge.
- Unmatched Italian Amenities: Strategically positioned near the main entrance, the bespoke galley is a jewel of Italian furniture craftsmanship. Thanks to a chilled compartment and a

dedicated coffee station, passengers are always moments away from a poured glass of sparkling prosecco or a freshly brewed espresso. For absolute discretion, a private aft lavatory awaits behind a sleek sliding door, luxuriously appointed with premium materials, including supple leather and rich Alcantara®.

- **Uninterrupted Connectivity:** Stay tethered to the world at altitude with Starlink®-capable USB-C ports, while standard 110V/220V inverters and “home-style” power sockets ensure devices never lose power. Additionally, dedicated Portable Electronic Device (PED) integration streams real-time flight telemetry directly to passenger fingertips.
- **Unmatched Versatility & Economics:** While boasting a VIP interior, the aircraft retains the P2012’s legendary short-field performance and rugged capabilities. Powered by twin Lycoming engines and equipped with Garmin G1000 NXi avionics, the P2012 VIP delivers exceptional operational efficiency and remarkably low operating costs compared to other executive twins and light jets.
