TECNAM TO INTRODUCE A NEW VISION FOR PERSONAL FLYING AT EAA AIRVENTURE OSHKOSH 2026

News / Events / Festivals, Manufacturer

Tecnam announced that EAA AirVenture Oshkosh 2026 will mark the public introduction of a new chapter in the company's history and its long-term vision for the future of personal flying. Developed over several years, this initiative represents far more than a new aircraft program. It reflects Tecnam's ambition to redefine the personal flying experience by combining Italian design, engineering excellence, and a renewed understanding of what aircraft ownership should represent for future generations.

During AirVenture Oshkosh, Tecnam will reveal the identity of this new program together with the philosophy that inspired its creation. Visitors will also experience an immersive installation that introduces the project's vision and showcases the first physical design element originating directly from the aircraft itself, offering an exclusive preview of what is to come.

Giovanni Pascale Langer, Managing Director of Tecnam commented: “The future of personal flying is about much more than performance. It is about creating an ownership experience that inspires people every time they approach their aircraft. This project has challenged every assumption we have made about personal flying. It represents years of research, passion, and collaboration, bringing together engineering, technology, and Italian design into a vision that looks well beyond today’s expectations.”

Every line, every proportion, and every decision has been driven by a single objective: creating an aircraft that people will not simply fly, but aspire to own. Inspired by Italy’s unique ability to transform engineering into emotion, the program embraces the values that have defined Tecnam throughout its history: innovation, craftsmanship, safety, simplicity, and timeless design.

Without revealing technical specifications, Tecnam confirms that the new aircraft has been conceived to establish new benchmarks within the company’s product portfolio, delivering a level of performance that will redefine expectations for personal flying. Oshkosh presentation has been intentionally designed as the opening chapter of this journey, inviting the aviation community to discover the philosophy behind the program before the complete aircraft is revealed in the months ahead.

Visitors attending AirVenture Oshkosh are invited to experience the beginning of a story that will continue to unfold as Tecnam prepares to introduce the next generation of personal flying. Additional information regarding the program and Tecnam’s activities during AirVenture Oshkosh 2026 will be announced in the coming weeks.
