

# US GRANTS AIRBUS, BOEING A CHANCE TO SELL AIRPLANES TO IRAN

News / Manufacturer

**The U.S. government granted aviation giants Airbus and Boeing permission on Wednesday to sell aircraft to Iran following last year's nuclear accord.**

**European airplane manufacturer Airbus announced the license from the U.S. Treasury's Office of Foreign Assets Control early Wednesday. Chicago-based Boeing followed with its own announcement later in the day.**

**The approval clears the way for the two plane manufacturers to access one of the last untapped aviation markets in the world. Both companies have announced separate \$25-billion deals to sell aircraft to airlines in the country, although analysts are skeptical that there is demand for so many jets or available financing.**

The deal would be the biggest for an American company since the 1979 Islamic Revolution and U.S. Embassy takeover.

The announcements come as Iranian and U.S. leaders are in New York for the United Nations General Assembly and shows that the outgoing administration of President Barack Obama is

honoring the economic terms of the nuclear pact.

Though based abroad, Airbus needed the approval of the U.S. Treasury's Office of Foreign Assets Control for the deal because at least 10 percent of the manufacturer's components are of American origin.

Airbus applied for two licenses to cover its deal with Iran to ensure the fast delivery of some of the aircraft, Airbus spokesman Justin Dubon told The Associated Press. The license announced Wednesday covers the first 17 planes involved in the deal, which will be A320s and A330s, he said.

Dubon said Airbus hoped to receive a second license allowing it to sell the remaining planes to Iran soon.

Iran's U.N. mission did not respond to a request for comment Wednesday. State television referred to an AP report on the sale.

Iran's nuclear deal with world powers, which limits its enrichment of uranium in exchange for the lifting of some international sanctions, specifically allowed for the purchase of aircraft and parts. That's set off a race between airplane manufacturers for the newly opened market, home to 80 million people.

In January, national carrier Iran Air signed agreements to buy 118 planes from Airbus, estimated to be worth some 22.8 billion euros (\$25 billion). On Sunday, state TV reported that Asghar Fakhrieh Kashan, a deputy transportation minister, said Iran would cut the number of Airbus planes to 112.

Base model A320s are listed at an average of \$98 million, while A330s start at \$231.5 million. That puts the value of the approved 17 aircraft in the first license around at least \$1.8 billion and possibly much higher based on list prices, though buyers typically negotiate sizable discounts for bulk orders.

Under Boeing's deal, Iran Air will buy 80 aircraft with a total list price of \$17.6 billion, with deliveries beginning in 2017 and running until 2025. Iran Air also will lease 29 new Boeing 737s. In a statement, Boeing spokesman Marc Sklar said "we have received that license and remain in talks with Iran Air" based on the memorandum of agreement reach in June.

The Boeing deal has been criticized by American lawmakers over Iran's "pernicious behavior," including launching ballistic missiles, firing rockets near U.S. warships in the strategic Strait of Hormuz and briefly detaining American sailors who strayed into its territorial waters.

The U.S. presidential election could also have an effect on the sales. Republican presidential candidate Donald Trump has threatened to tear up the nuclear deal if elected this November.

Most Iranian planes were purchased before the Islamic Revolution that ousted Shah Mohammad Reza Pahlavi and brought Islamists to power. Out of Iran's 250 commercial planes, 162 were flying in June, while the rest were grounded due to lack of spare parts.

Iran Air, whose website lists 43 airplanes in its fleet, says it has direct flights to over 30 international destinations, including London.
